

Circular craft centre - a network

Here, the five building blocks of a circular craft centre are spread across the region, city or town. They exchange materials and services with each other.

1 Recycling point

Here you can drop off items and materials that are reusable or repairable. Non-reusable items are recycled, sometimes after disassembly.

2 Social circular organisation

Reusable items go to the social circular organisation. They are checked, cleaned and sold in the shop.

Social circular organisation

3 Repair

Products that no longer work are repaired here. Often you can also visit the Repair Café yourself to have your own items repaired.

Repair

5 Education

The circular craft centre works together with schools. For example, by offering lesson materials about circularity to primary schools and internships for students.

Education

Social domain

4 Social domain

People from the social domain work throughout the circular craft centre. They face barriers to employment or receive social support.

Optional building blocks

- Disassembly hall
- Entrepreneurs/commercial partners
- Upcycling workshop
- Initiatives for the sharing economy

Reusable items or materials can go to the social circular organisation, but also to entrepreneurs, schools or foundations.
